

Talk your way to a **dollar-paying** remote job.

A real-time voice agent that searches live remote jobs for Indonesian workers, reads the best matches aloud, answers follow-ups, and lets you cut in at any time.

THE PROBLEM

Remote dollar jobs can pay Indonesians $\sim 7\times$ the local wage. Finding one is the hard part.

Rp 5.4M

Jakarta monthly minimum wage (UMP DKI 2025)

$\approx$ Rp 40M

A remote support job at \$15/hour, per month (160 h $\times$ Rp 16,500/USD)

Boards built for the US/EU

"Remote" often means "remote, US only". Eligibility is hidden in the fine print.

Pay in the wrong units

"\$85k a year" means little until it becomes "about Rp 117 million a month".

Typing English filters is a barrier

People think in Bahasa and mix in English: "cari kerja remote React yang bayar dolar".

DEMO

Say it. Hear the top three. Say "the second one".

LokerDollar Voice

Speaking

Mute

Number three, Customer Support Manager at Vetcove, 85 thousand to 130 thousand US dollars a year. Which one do you want to hear more about?

YOU

Tell me more about the second one.

LOKER

That role pays 15 to 18 US dollars an hour, which is about 43 million rupiah a month. The employer eligibility is unknown, so you should check that before applying. The Apply button is on your screen.

HOW IT USES ASSEMBLYAI

One Voice Agent WebSocket: STT, LLM, TTS, turns, tools.

Temporary tokens	Worker mints a single-use token (60 s, 10-min session cap). The API key never reaches the browser.
Client-side function tools	<code>search_jobs</code> and <code>get_job</code> in interactive mode. <code>tool.result</code> is sent exactly when <code>reply.done</code> is the latest event.
Barge-in	On <code>reply.done</code> : <code>interrupted</code> the client drops queued audio and stale tool results immediately.
Key terms + transcription prompt	Biases recognition toward React, Figma, Shopify and "cari kerja", "lowongan", "gaji".
Word-level agent transcript	<code>transcript.agent.delta</code> lights up the card the agent is talking about.

WHAT MAKES IT FEEL LIVE

Voice and screen **move together.**

Cards before speech

Tools run in the browser, so the job cards appear as the agent says "let me check", before it reads the results.

The card follows the voice

When the agent says "number two" or a company name, that card lights up in time with the audio.

Tap or talk, one context

Ask about this on a card and typed messages go into the same conversation
(`conversation.message` + `reply.create`).

Rupiah, not just dollars

Every job shows a monthly IDR estimate, and the agent says it: "about 131 million rupiah a month".

Honest eligibility

Open to Indonesia, not stated, or region-locked. "LATAM applicants only" is flagged and ranked lower.

No links read aloud

URLs are removed before the model sees results, so it cannot make up a link. Apply links come from the API unchanged.

BUSINESS VALUE

A voice front door to a **real, live** job marketplace.

~4,800

open remote jobs filtered for Indonesian applicants

~1,300

hiring companies worldwide

**\$500–
\$45.8k**

monthly USD salary range observed

- **Live data, not a mock.** Every answer comes from LokerDollar's production job database through its public MCP server, drawn from 29,000+ postings indexed since launch (open-job figures from lokerdollar.com/llms.txt, 2026-09-25).
- **Lower barrier, wider funnel.** People who would not type an English search can simply ask. Each spoken request ends at a real Apply link on LokerDollar.
- **Same agent, more channels.** The Voice Agent API also connects over SIP, so a phone number for workers without a laptop is a configuration change, not a rebuild.

ROADMAP

From job search to **getting hired.**

- **Native Bahasa Indonesia** speech in and out, once AssemblyAI adds Indonesian (today: mixed-language input understood, simple-English replies).
- **Phone line** through AssemblyAI SIP + Twilio, for workers without a laptop.
- **Interview practice mode:** the same agent runs a mock screening call for the job you picked.
- **Saved shortlists** and "call me when a match appears" alerts.
- **Full job details** behind LokerDollar's keyed API tier.
- **Employer side:** a voice pre-screen that sends shortlisted candidates to employers.
